

Download and installation tips for SatCur.

If you have trouble downloading Windows programs, contact your administrator.

Create a dedicated folder for the program anywhere on a local disk, and copy the complete contents of the .zip file in that folder. There is no need for additional installation steps beyond that.

Along with SatCur.exe come a license file, which MUST be kept in the same location, and three .hlp files for help – but that will only function if you have a working version of WinHlp32.exe . But, there is quite some internal help available anyhow, skipping the .hlp files.

There are no additional in- or output files for SatCur.

To completely remove SatCur from your computer you only have to delete the copied files.
